February 1995

Operated by Universities Research Association Inc. under Contract No. DE-AC02-76CHO3000 with the United States Department of Energy

Disclaimer

Calculated Secondary Yields for Proton Broadband
Using DECAY TURTLE

Allan Sondgeroth
Janurary 5, 1995

Tabulated information:

For 100Gev Tune:

Location	Yield [N/P(incident)]	Average Energy [Gev]
DS end of target box	6.91E-2	287
PB4CON	7.20E-2	258
DS end of PB4	4.40E-2	350
US end of PB5	4.40E-2	350
DS end of Neutral Dump	7.64E-3	143
DS end of PB5	1.80E-3	103
US end of PB6	1.80E-3	103
DS end of PB6	1.14E-3	100

For 250Gev Tune:

Location	Yield [N/P(incident)]	Average Energy [Gev]
DS end of target box	6.88E-2	287
PB4CON	6.48E-2	279
DS end of PB4	3.73E-2	407
US end of PB5	3.73E-2	407
DS end of Neutral Dump	3.79E-3	227
DS end of PB5	6.60E-4	250
US end of PB6	6.60E-4	250
DS end of PB6	4.02E-4	239

Methodology:

The calculations for the yields were done by Al Sondgeroth and Anthony Malensek. We used the DECAY deck called PBSEC_E.DAT from the CMS DECKS library. After obtaining the run modes and calibration modes from the liason physicist, Selcuk Cihangar, we made individual decay runs, using DECAY

TURTLE from the CMS libaries and a production spectrum subroutine which was modified by Anthony, for each particle and decay mode for all particle types coming out of the target box. Results were weighted according to branching ratios for particles with more than one decay mode. The production spectra were produced assuming berylium as the target. The optional deterium target available to broadband will produce slightly higher yields. It should be noted that we did not include pion yields from klong decays because we could not simulate three body decays. Pions from klongs would add a very small fraction to the total yield.

Attached you will find charts and a spreadsheet with more detailed information. For more information, including computer runs, contact Al Sondgeroth by phone at X8516 or by e-mail at FNALV::SONDGEROTH.
